

A short portrait about myself:

Name: **Julian Golderer** <julian@golderer.net>
Place of living: 6858 Schwarzach, Linzenberg 24
Phone: 0650-6229918

Special Paper (Engineering Project):

My project is about an interactive information system. It is going to be placed after the entrance of the HTL. Our primary goals are to create a system based on open source software which can be easily expanded in two ways. On one hand, it should be possible to add several information stations distributed in the building. On the other, the software has to be flexible so that other students can adjust it to new requirements.

Practical Experience:

In my summer holidays I worked two times for the Vorarlbergian energy producer VKW. In the third year I got a job at the Offset printing company and in the last year the elevator producer Doppelmayr gave me a job.
I also worked different times through the year on business homepages.

Special Skills:

My characteristic skill is my hobby. I like doing things on computer and I spend a lot of time on that. There are many things I know about Windows and much more about GNU/Linux. Network services are my life.

Software Skills:

My life consists of Linux Kernel compiling, system administration and programming in web based script languages. I'm familiar with:

- the Linux shell
- PHP, CSS, JavaScript, XHTML (W3C valid) using QuantaPlus
- Apache (1 and 2)
- Postfix (including spam and virus filters)
- Internet topology and technology

and I also know much about

- the Jabber network (I run my own server)
- KDE and Gnome Desktop
- OpenOffice
- different Linux distributions
- vi
- routing and firewalls
- NFS and NIS
- and everything I forgot :)

Job Requests:

After my final exam I'd like to work for two or three years in a small firm. It is much more interesting to work in small groups where I can integrate myself. Later I want to create my own company offering any kind of computer services which has to do with open source and internet technologies.
